

Retrofitting of a humidity sensor

For all ILLIG UA machines we offer a humidity sensor for dry run protection for pumps. With this sensor in the vacuum pipeline the permanent detection of liquids in the piping is possible.

In case of humidity in the sensor an error message will be generated and the machine will stop. The installation position of the humidity sensor is dependent on the machine equipment. If applicable the installation can be done by the customer.

Your benefits

- | Early detection of humidity in the vacuum pipe
- | Dry run protection for pumps
- | No complete failure of the pump

Available for machines

For all UA machines
